Date	Type of consultation	Actor / Institution	Topic	Question / Comment	Project Response	Action / Follow-up
13/03/2026	Virtual	Institute of Hydrology, Meteorology and Environmental Studies (IDEAM)	Alignment with the Forest and Carbon Monitoring System	The articulation between Biofix and IDEAM could be carried out through the forest and carbon monitoring system, as well as through hydrometeorological monitoring components.	Both components could be considered within the framework of the safeguards established by Gold Standard, particularly regarding the monitoring of relevant environmental variables for the project's development.	Materialize the coordination with IDEAM to advance the mentioned components.
17/03/2026	In-person	Puerto Gaitán Mayor's Office - Meta (SEAM)	NbS Nature	It was stated that commercial plantations do not strictly constitute a Nature-Based Solution (NbS).	BIOFIX explained that the commercial component provides economic incentives to finance the gradual transition toward systems with a higher proportion of native species.	Strengthen and document the technical justification of the project's NbS approach, incorporating technical evidence and references to international standards, as well as clearly describing the transition pathway toward a higher proportion of native species in official project documents (PDD and annexes).
17/03/2026	In-person	Puerto Gaitán Mayor's Office - Meta (SEAM)	Species Selection	It was recommended to avoid the use of Yopo in riparian areas.	The recommendation is accepted, and species such as Moriche and Seje will be prioritized in flood-prone areas, in line with the technical requirements of the environmental authority (Cormacarena).	Adjust silvicultural design in riparian areas.
17/03/2026	In-person	Municipal Ombudsman's Office	Governance and Contracts	Clarification was requested regarding the contractual	The Temporary Association scheme was explained: land is	Maintain contractual transparency and continuous stakeholder engagement.
